Driver "class" in Java

For this assignment, I'm expecting a simple command-line interface, which you should test on lecture. This is easy with a "class" (a misnomer) that reads from the command line. Here is a stub you can modify:

```
/* file Fibonacci.java */

public class Fibonacci
{
    public static void main( String[] argv )
    {
        int n = Integer.parseInt(argv[0]);
        System.out.println( "I am supposed to print the answer for argument " + n +
    }
}
```

If you have further questions, please post on Piazza.
